

SINGLE SIDED MESH BANNERS

PRODUCT DESCRIPTION

Mesh is used where weight and wind are a factor in the installation process and durability of the banner's life span. There are several types of mesh available, each with its own specific amount of blow-through.

*NOTE: The term **blow-through** refers to the percentage of printable material to the percentage of holes in the material. (For example blow-through is 70/30. This proportion means that the surface area of the banner is 70% printable material, and 30% holes.)*

SUGGESTED APPLICATIONS

Construction Sites	Fence Banners
Building Banners	Seat Kills
Sporting Events	Stadiums
