

# TRANSLIGHT BACKLIT

## PRODUCT DESCRIPTION

Translight backlit graphics are produced on optically clear polyester film that has no adhesive backing. The film is sandwiched between a protective sheet of clear polycarbonate or acrylic and a white rigid diffuser. It is then placed inside an illuminated sign cabinet or menu board. This allows the graphic to be changed frequently with ease due to the lack of adhesive residue.

## SUGGESTED APPLICATIONS

Advertising	Illuminated Menu Boards
Interior Illuminated Sign Cabinets	Lighted Wayfinding Signage
